# Thank You for Choosing Ross

You've made a great choice. We expect you will be very happy with your purchase of Ross Technology.

Our mission is to:

1. Provide a Superior Customer Experience
  - offer the best product quality and support
2. Make Cool Practical Technology
  - develop great products that customers love

Ross has become well known for the Ross Video Code of Ethics. It guides our interactions and empowers our employees. I hope you enjoy reading it below.

If anything at all with your Ross experience does not live up to your expectations be sure to reach out to us at [solutions@rossvideo.com](mailto:solutions@rossvideo.com).

David Ross  
CEO, Ross Video

## Ross Video Code of Ethics

Any company is the sum total of the people that make things happen. At Ross, our employees are a special group. Our employees truly care about doing a great job and delivering a high quality customer experience every day. This code of ethics hangs on the wall of all Ross Video locations to guide our behavior:

1. We will always act in our customers' best interest.
2. We will do our best to understand our customers' requirements.
3. We will not ship crap.
4. We will be great to work with.
5. We will do something extra for our customers, as an apology, when something big goes wrong and it's our fault.
6. We will keep our promises.
7. We will treat the competition with respect.
8. We will cooperate with and help other friendly companies.
9. We will go above and beyond in times of crisis. *If there's no one to authorize the required action in times of company or customer crisis - do what you know in your heart is right. (You may rent helicopters if necessary.)*

## Safety Notices

Refer to the “**Important Regulatory and Safety Notices**” document that accompanied your product.

## Statement of Compliance

This product has been determined to be compliant with the applicable standards, regulations, and directives for the countries where the product is marketed.

Compliance documentation, such as certification or Declaration of Compliance for the product is available upon request by contacting [techsupport@rossvideo.com](mailto:techsupport@rossvideo.com). Please include the product; model number identifiers and serial number and country that compliance information is needed in request.

# EMC Notices

## United States of America - FCC Part 15

This equipment has been tested and found to comply with the limits for a class A Digital device, pursuant to part 15 of the FCC Rules.

These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a Commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

## Canada

This Class A device complies with Canadian ICES-003 and part 15 of the FCC Rules.

Cet appareil numerique de la classe "A" est conforme a la norme NMB-003 du Canada.

**Notice** — *Changes or modifications to this equipment not expressly approved by Ross Video Ltd. could void the user's authority to operate this equipment.*

## European Union

This equipment is in compliance with the essential requirements and other relevant provisions established under regulation (EC) No 765/2008 and Decision No 768/2008/EC referred to as the "New Legislative Framework".

**Warning** — *This equipment is compliant with Class A of CISPR 32. In a residential environment this equipment may cause radio interference.*

## Australia/New Zealand

This equipment is in compliance with the provisions established under the Radiocommunications Act 1992 and Radiocommunications Labelling (Electromagnetic Compatibility) Notice 2008.

## Korea

This equipment is in compliance with the provisions established under the Radio Waves Act.

Class A equipment (Broadcasting and communications service for business use).

This device is a business-use (Class A) EMC-compliant device. The seller and user are advised to be aware of this fact. This device is intended for use in areas outside home.

| Type of Equipment                                                        | User's Guide                                                                                                                                                                                          |

| Class A Equipment<br>(Industrial Broadcasting & Communication Equipment) | This equipment is <b>Industrial (Class A) electromagnetic wave suitability equipment</b> and seller or user should take notice of it, and this equipment is to be used in the places except for home. |

## International

This equipment has been tested under the requirements of CISPR 22:2008 or CISPR 32:2015 and found to comply with the limits for a Class A Digital device.

**Notice** — *This is a Class A product. In domestic environments, this product may cause radio interference, in which case the user may have to take adequate measures.*

## Warranty and Repair Policy

The product is backed by a comprehensive one-year warranty on all components.

**Notice** — *Changes or modifications to this equipment not expressly approved by Ross Video Limited could void the user's authority to operate this equipment.*

If an item becomes defective within the warranty period Ross will repair or replace the defective item, as determined solely by Ross.

Warranty repairs will be conducted at Ross, with all shipping FOB Ross dock. If repairs are conducted at the customer site, reasonable out-of-pocket charges will apply. At the discretion of Ross, and on a temporary loan basis, plug in circuit boards or other replacement parts may be supplied free of charge while defective items undergo repair. Return packing, shipping, and special handling costs are the responsibility of the customer.

This warranty is void if products are subjected to misuse, neglect, accident, improper installation or application, or unauthorized modification.

In no event shall Ross Video Limited be liable for direct, indirect, special, incidental, or consequential damages (including loss of profit). Implied warranties, including that of merchantability and fitness for a particular purpose, are expressly limited to the duration of this warranty.

This warranty is TRANSFERABLE to subsequent owners, subject to Ross' notification of change of ownership.

## Extended Warranty

For customers that require a longer warranty period, Ross offers an extended warranty plan to extend the standard warranty period by one year increments. For more information, contact your regional sales manager.

## Environmental Information

The equipment may contain hazardous substances that could impact health and the environment.

To avoid the potential release of those substances into the environment and to diminish the need for the extraction of natural resources, Ross Video encourages you to use the appropriate take-back systems. These systems will reuse or recycle most of the materials from your end-of-life equipment in an environmentally friendly and health conscious manner.

The crossed-out wheeled bin symbol invites you to use these systems.

If you need more information on the collection, reuse, and recycling systems, please contact your local or regional waste administration. You can also contact Ross Video for more information on the environmental performances of our products.

This appliance may contain a Coin type battery which should not be treated as household waste.

To ensure that the battery will be treated properly use the appropriate take-back systems in your area. These systems will reuse or recycle most of the materials from your end-of-life equipment in an environmentally friendly and health conscious manner.

## Security and Privacy

If you would like more information on how Ross Video security and privacy practices have been applied to the Ultritouch, what you should know about maintaining security of this product, and how we can partner with you to ensure security throughout this product's life-cycle, contact [techsupport@rossvideo.com](mailto:techsupport@rossvideo.com).

Ross Video has implemented reasonable administrative, technical, and physical safeguards to help protect against security incidents and privacy breaches involving a Ross Video product provided those products are used in accordance with Ross Video instructions for use. However, as systems and threats evolve, no system can be protected against all vulnerabilities and we consider our customers the most important partner in maintaining security and privacy safeguards. If you have any concerns, we ask that you bring them to our attention, and we will investigate. Where appropriate, we will address the issue with product changes, technical bulletins and/or responsible disclosures to customers and regulators. Ross Video continuously strives to improve security and privacy throughout the product life-cycle using practices such as:

- Privacy and Security by Design
- Product and Supplier Risk Assessment
- Vulnerability and Patch Management
- Secure Coding Practices and Analysis
- Vulnerability Scanning
- Access Controls appropriate to Customer Data
- Incident Response
- Clear paths for two-way communication between customers and Ross Video

If you would like to report a potential product related privacy or security issue (incident, breach, or vulnerability), contact [techsupport@rossvideo.com](mailto:techsupport@rossvideo.com).

# Introduction

This guide covers the installation, configuration, and operation of the Ultritouch-2-HR and Ultritouch-4. The following chapters are included:

- **“Introduction”** summarizes the guide and provides important terms, and conventions.
- **“Getting Started”** provides an overview for creating a routing system with Ultritouch, and general information to keep in mind before installing and configuring your Ultritouch panel.
- **“Hardware Overview”** provides a basic introduction to the Ultritouch front and rear panels.
- **“Physical Installation”** provides instructions for the basic physical installation of the Ultritouch panel.
- **“Cabling”** provides instructions for connecting the Ultritouch to your network, and connecting the panel to a power source.
- **“Configuring the Network Settings”** provides instructions for configuring the network settings for the Ultritouch and navigating the touch-screen menus.
- **“Basic Navigation”** outlines the methods for accessing the Ultritouch menu system.
- **“Configuring the Screensaver”** outlines how to use enable the screen saver feature for your Ultritouch touchscreen.
- **“Communications with Devices”** outlines how to enable the Ultritouch to communicate with devices in your routing system.
- **“Using with Ultrix”** provides an overview of the installation, configuration, and use of the Ultritouch with an Ultrix router.
- **“Soft Panels Operation”** briefly summarizes how to load and operate a soft panel using the Ultritouch touchscreen.
- **“Multiviewer Operation”** outlines how to use an Ultritouch MV soft panel for Multiviewer control via the Ultritouch.
- **“Using Categories”** outlines how to use an Ultritouch soft panel that includes Category Index and Group Category elements to perform crosspoint switches on an Ultrix router.
- **“File Management”** outlines how to load a custom panel to Ultritouch and how to access the File Navigator interface, and manage your device files from the Ultritouch panel.
- **“Managing Open Windows”** outlines how to use this feature to quickly navigate, manage, and operate the devices connected to your Ultritouch.
- **“Creating a Backup”** outlines how to create a backup of the current configuration of the Ultritouch.
- **“Menu System Overview”** summarizes the functions, menus, and parameters of the Ultritouch tabs and windows in DashBoard.
- **“Technical Specifications”** provides the specifications for the Ultritouch.
- **“Glossary”** provides a list of terms used throughout this guide.

## Related Publications

It is recommended to consult the following Ross documentation before installing and configuring your Ultritouch:

- ***DashBoard User Guide***, Ross Part Number: 8351DR-004
- ***Ultritouch Quick Start Guide***, Ross Part Number: 2201DR-902
- ***Ultritouch + Ultrix User Guide***, Ross Part Number: 2201DR-904
- ***Ultrix and Ultricore Database Guide***, Ross Part Number: 2201DR-109

- **ULTRIX-FR1, ULTRIX-FR2, and ULTRIX-FR5 User Guide**, Ross Part Number: 2101DR-004
  - **ULTRIX-FR12 User Guide**, Ross Part Number: 2101DR-604

- ★ The user documentation is available for download from our website.

## Documentation Conventions

Special text formats are used in this guide to identify parts of the user interface, text that a user must enter, or a sequence of menus and sub-menus that must be followed to reach a particular command.

### Interface Elements

Bold text is used to identify a user interface element such as a dialog box, menu item, or button. For example:

In the **Edit** dialog, click **Insert Above**.

### User Entered Text

Courier text is used to identify text that a user must enter. For example:

In the **Language** box, enter **English**.

### Referenced Guides

Italic text is used to identify the titles of referenced guides, manuals, or documents. For example:

For more information, refer to the *Ultrix User Guide*.

### Menu Sequences

Menu arrows are used in procedures to identify a sequence of menu items that you must follow. For example, if a step reads "**File** > **Save As**," you would click the **File** menu and then click **Save As**.

### Important Instructions

Star icons are used to identify important instructions or features. For example:

- ★ Contact your IT department before connecting to your facility network to ensure that there are no conflicts. They will provide you with an appropriate value for the IP Address, Subnet Mask, and Gateway for your device.

## Contacting Technical Support

At Ross, we take pride in the quality of our products, but if problems occur, help is as close as the nearest telephone.

Our 24 Hour Hot Line service ensures you have access to technical expertise around the clock. After-sales service and technical support is provided directly by Ross personnel. During business hours (eastern time), technical support personnel are available by telephone any time. After hours and on weekends, a direct emergency technical support phone line is available. Emergency after hours calls are answered by an answering service (live person) who will patch your call to the on-call support specialist. In the event that the on-call person is assisting another customer, the answering service will contact the back-up support specialist.

- **Toll Free Technical Support (North America):** +1 833-859-0499

- **Toll Free Technical Support (EMEA):** +800 3540 3545\*
- **Technical Support (North America):** +1 613-686-1557
- **Technical Support (Australia/Sydney):** 1300 007 677\*
- **E-mail:** [techsupport@rossvideo.com](mailto:techsupport@rossvideo.com)
- **Website:** <http://www.rossvideo.com>

\* If the local support specialist is not available, your call will be transferred automatically to our North America center.

# Getting Started

If you have questions pertaining to the operation of Ultritouch, contact us at the numbers listed in **“Contacting Technical Support”**. Our technical staff is always available for consultation, training, or service.

★ This guide uses the term Ultritouch to reference both the Ultritouch-2-HR and Ultritouch-4 unless otherwise noted.

## Overview

Ultritouch is a forward thinking, powerful system control panel from Ross Video. The panel is a rack-mountable touchscreen that combines traditional functionality while adapting work flows in a simple and intuitive interface. Due to its integration of DashBoard, Ultritouch controls a host of other Ross equipment in addition to third-party signal processing products.

Ultritouch supports a full version of DashBoard, which allows users to control and monitor things like openGear cards, create custom panels, etc. Not only do these new enhanced panel work flows encompass the broad range of hard panel operations, but they also provide a fully integrated touch UI that enables a user to quickly setup and use their panel.

The touchscreen also means that users can use the common DashBoard framework to build a completely custom set of panels with different button combination sizes, functions, and layouts, enhancing what is possible from a normal hardware button-based panel. Ultritouch combines common DashBoard touch controls, enhanced work flow specific product controls, and the ability to make completely user-definable panels for any application.

## Features

The Ultritouch is used when you require advanced control functions from a single point. DashBoard client software runs on the Ultritouch panel to provide flexible connectivity.

The following features are included:

- Touch-enabled DashBoard based remote control panel (RCP)
- Redundant power supply option
- Integrated speakers for monitoring
- HDMI and USB for external KVM operation
- DashBoard client software built on Ethernet and TCP/IP technology to allow remote access across LAN architectures
- Standard UI layout for openGear cards
- DashBoard tree and system management support
- Ability to store multiple panel types with intuitive navigation based on desired work flow
- Load customized user interfaces to control a wide range of Ross Video products and third-party systems
- Full control of DashBoard Connect devices with real-time control and alarming from a single Ultritouch panel
- Ability to have multiple control views active and available for selection on one touchscreen
- Easily upgrade the software and firmware on the Ultritouch panel in the field

## System Overview

The Ultritouch is used when you require advanced control functions from a single point.

Figure 1 Example of a Possible Routing System with Ultritouch-2-HR

## Before You Begin

Before configuring and operating the Ultritouch, contact your IT department before connecting to your facility network to ensure that there are no conflicts.

## Installation and Setup Overview

The generalized work flow of installing and configuring your Ultritouch is:

1. Implement your routing system plan by installing the devices, configuring their settings, and setting up your databases and matrices. Refer to the ***Ultrix and Ultricore Database Guide***.
2. Install and configure the Ultritouch.
3. Establish communications between Ultritouch and the devices in your routing system.
4. Install required license keys for additional device control.

### For More Information on...

- downloading and installing DashBoard, refer to the ***DashBoard User Guide***.
- planning and installing your routing system, refer to the user documentation that accompanied your devices.

## Ultritouch Operation Overview

Once configured, the Ultritouch provides central controller functionality for the routing system, including:

- the storage and implementation of routing system configurations, which collect a series of routing matrices into a system and provide a logical database view of the whole system
- switching the physical crosspoints of the routers according to the system configuration
- the control and system database interface for devices that control and/or display routing status (e.g. remote control panels, switchers, master control, automation systems, multi-viewers, and tally systems)
- virtual routing, matrix partitioning, and mapping
- label support for protocols supporting labels
- system control through DashBoard client software running on the Ultritouch panel
- connection and status logging

### For More Information on...

- databases, refer to the ***Ultrix and Ultricore Database Guide***.

## Using Custom Panels on Ultritouch

Once your router connections are defined, and a database is established, you can start building a map of several different physical devices that become one virtual device. When a switch request is made for a virtual device, all the physical devices that are mapped to the virtual device are switched.

Ultritouch enables you to map inputs and outputs from routers for control via any remote control panel. These parameters can be saved to a database, enabling you to change configurations easily and quickly, allowing devices to be used in a number of different operating scenarios.

### For More Information on...

- databases, refer to the ***Ultrix and Ultricore Database Guide***.

## Software Upgrades

If you need to upgrade an Ultritouch, refer to the ***Ultritouch Upgrade Application Note*** for details.

# Hardware Overview

This chapter presents information on the front and rear panels of the Ultritouch-2-HR and Ultritouch-4.

## Front Panel Overview

Each Ultritouch front panel is a touchscreen display that enables you to access the features, settings, and monitoring options of the product. (**Figure 2, Figure 3**)

Figure 2 Ultritouch-2-HR — Front Panel with Ultritouch Device Interface Displayed

Figure 3 Ultritouch-4 — Front Panel with Ultritouch Device Interface Displayed

### 1. DB Button

Tap this button to display the Ultritouch Device interface, which is the main/Home menu. From this interface you access the following configuration features:

- › General Info
- › Manage Open Views
- › Manage Custom Panels
- › Connected Devices
- › Network Settings
- › License Management

## 2. Connected Devices Button

Tap this button to display the All Connections interface in the Main Window. This interface reports the external devices that are communicating with the Ultritouch. Each device is represented as an individual button that when tapped displays the DashBoard menu system in the Main Window. Devices are added to the All Connections interface via the Ultritouch Device > Connected Devices interface.

## 3. File Navigator Button

Tap this button to display the File Navigator interface in the Main Window. Use this interface to select any custom panels uploaded into Ultritouch.

## 4. Open Windows Button

Tap this button to reveal thumbnails of the currently open windows. Tapping a thumbnail opens that window full screen. This is useful for swapping between control panels for different devices.

## 5. Lock Button

Tap this button to lock the Ultritouch panel and display a spinner icon. You must tap and spin the icon to unlock the interface.

## 6. Home Window

The items in this window change depending on the function selected. This window can also display the currently loaded Ultrix soft panel or a custom panel for a DashBoard Connect compatible device.

## 7. Headphone Jack (Ultritouch-4RU only)

This is a 3.5mm headphone jack. When in use, the internal speaker of the Ultritouch panel is muted.

## 8. USB Port (Ultritouch-4RU only)

This is a standard USB 3.0 port. This port is not implemented.

# Rear Panel Overview

The Ultritouch rear panel provides connections for power supplies, communications, and network connections.

### For More Information on...

- the power specifications, refer to **Table 11**.

Figure 4 Ultritouch-2-HR — Rear Panel, Side View

Figure 5 Ultritouch-4 — Rear Panel, Side View

### 1. PWR1 and PWR2 Connections

There are two power supply connectors located on the rear of each Ultritouch. Each connector requires a 15VDC connection to an external power supply.

**Notice** — *The Ultritouch automatically powers on when power is applied.*

Each Ultritouch ships with one power supply. An option is available to order a second power supply for redundancy.

### 2. HDMI Port

This port is not implemented.

### 3. USB Port

This port is not implemented.

### 4. ENET1 and ENET2 Ports

Each ENET port is an RJ45 connector used to connect the Ultritouch to an external Ethernet network.

**Notice** — *The Ethernet ports do not provide, nor make use of, Power-over-Ethernet (PoE).*

Use the to bridge the external Ethernet network to the local communications bus for monitoring and control of the Ultritouch.

★ The **ENET 2** port is not implemented.

# Physical Installation

If you have questions pertaining to the installation of Ultritouch, contact us at the numbers listed in **“Contacting Technical Support”**. Our technical staff is always available for consultation, training, or service.

## Before You Begin

These installation guidelines assume the following:

- The relevant Ross equipment is installed into a ventilated rack frame. The relative humidity in the environment of the equipment should be <70% (non-condensing). The ambient temperature of the air entering the front panel should not exceed 40°C (104°F), and should not fall below 0°C (32°F).
- The install location of the panel should be accessible, dry, and dust-free.
- The socket/outlet should be installed near the equipment and be easily accessible.
- Valid IP addresses are assigned to the equipment by your IT Department.

### Static Discharge

Throughout this chapter, please heed the following cautionary note:

**ESD Susceptibility** — *Static discharge can cause serious damage to sensitive semiconductor devices. Avoid handling circuit boards in high static environments such as carpeted areas and when synthetic fiber clothing is worn. Always exercise proper grounding precautions when working on circuit boards and related equipment.*

## Mounting Requirements

Under some conditions, the ambient air temperature inside rack-mount cabinets can be greater than the ambient temperatures within a room. For safe long term reliability, ensure the ambient air temperatures of the panel are within the panel's specified operating temperature range. Adequate ventilation within a rack frame must also be maintained.

### For More Information on...

- the technical specifications for the Ultritouch, refer to **“Technical Specifications”**.

## Rack Mounting the Ultritouch

The Ultritouch panel is designed for installation into a standard 19” equipment rack. It has integrated rack ears, allowing it to be screwed in using standard screws and cage nuts.

The Ultritouch panel mounts in the rack frame by means of four rack screws fastened through the front mounting ears. This should normally be sufficient to carry the load, including the weight of accompanying cables.

### For More Information on...

- rack mounting the Ultritouch, refer to the ***Ultritouch Quick Start Guide***.

## VESA Mounting the Ultritouch-4

The Ultritouch-4 can also be used in a VESA 100mm compliant (flat-back) mount where there are four holes at 100mm pitch in a square pattern on the center of a VESA mounting application. Installing the Ultritouch-4 to a VESA mount requires you to:

1. Remove the rack mount brackets from either side of the Ultritouch-4 panel.
2. Install the U4-VESA100 plate to the Ultritouch-4 panel.
3. Install the Ultritouch-4 and U4-VESA100 plate to your VESA mount.

## Required Equipment

You will need:

- One Phillips #1 screwdriver
- One Phillips #2 screwdriver
- One Ultritouch-4 panel
- One U4-VESA100 Kit which includes one plate (P/N 2201FR-089), four #6-32 screws (P/N 88-01087), and four M4 mounting screws (P/N 850-062R)

## Removing the Rack Mount Brackets from the Ultritouch-4

The Ultritouch-4 comes standard with rack mount brackets affixed to each side of the panel via six screws per bracket. Each rack mount bracket includes a front mounting ear and an end bracket. When installing the Ultritouch-4 in a VESA mount application, you must first remove each rack mount bracket from the Ultritouch-4 panel, separate the front mounting ear from the end bracket, and then re-install the end bracket back onto the panel.

---

**ESD Susceptibility** — *Static discharge can cause serious damage to sensitive semiconductor devices. Avoid handling circuit boards in high static environments such as carpeted areas and when synthetic fiber clothing is worn. Always exercise proper grounding precautions when working on circuit boards and related equipment.*

---

### To remove the rack mount brackets from the Ultritouch-4 panel

1. Set the Ultritouch-4 on a flat, clean, and static-free surface with the display facing away from you.
  2. On the left-side of the Ultritouch-4, locate the six screws that affix the rack mount bracket to the panel.
  3. Use a Phillips #1 screwdriver to remove the screws. Set the screws aside.
- ★ You will need these screws to re-install the end bracket onto the Ultritouch-4 panel.

*Figure 6 Removing the Left Rack Mount Bracket from the Ultritouch-4 Panel*

4. Pull the rack mount bracket away from the Ultritouch-4.
5. Separate the front mounting ear from the end bracket. Set the front mounting ear aside.
6. Re-install the end bracket onto the left-side of the panel using the screws from step 3.

*Figure 7 Re-installing the Left End Bracket on the Ultritouch-4 Panel*

7. Repeat steps 2 to 6 for the rack mount bracket on the right-side of the panel.

## **Installing the U4-VESA100 to the Ultritouch-4**

The U4-VESA100 plate includes four pairs of opposing holes and four #6-32 screws. You must position the plate over the four VESA Adapter Plate holes on the Ultritouch-4 panel, then attach the plate using the provided screws.

### **To install the U4-VESA100 to the Ultritouch-4**

1. Determine where and how the Ultritouch-4 will be affixed to the VESA mount. Ensure:
  - the Ultritouch-4 will not interfere or block any ports, connectors, or other features of nearby equipment;

- access to the Ultritouch-4 connections is available once it is installed on the VESA mount.
2. Set the Ultritouch-4 on a flat, clean, and static-free surface with the display facing down.
  3. Locate the four VESA Adapter Plate holes (outlined with white circles) on the rear of the Ultritouch-4 panel.
  4. Position the U4-VESA100 plate over the four holes.
  5. Use a Phillips #2 screwdriver and the provided screws to fasten the plate to the panel. (**Figure 8**)

*Figure 8 U4-VESA100 Bracket on the Ultritouch-4 Panel*

## Installing the Ultritouch-4 to a VESA Mount

The U4-VESA100 is designed to be used in a VESA 100mm compliant (flat-back) mount where there are four holes at 100mm pitch in a square pattern. You will need to use these four holes to affix the Ultritouch-4, via its U4-VESA100 plate and the provided four M4 mounting screws, to the VESA mount.

- ★ The four M4 mounting screws assume your VESA mount has a material thickness of ~2mm (0.08").

### To install the Ultritouch-4 to a VESA 100mm mount

1. Install the VESA 100mm mount as outlined in its documentation.
  2. Position the Ultritouch-4 over the VESA mount, ensuring the U4-VESA100 plate aligns over the screw holes of your VESA 100mm mount.
  3. Secure the Ultritouch-4 to the VESA mount using the provided four M4 mounting screws.
- ★ Ensure your mounting screws accommodate the Ultritouch-4 U4-VESA100 plate yet still engage with the mount.
4. Secure the Ultritouch-4 power supply.

# Cabling

This chapter outlines how to establish a physical connection between the Ultritouch panel and your facility network, and then to a power supply.

## Connecting the Ultritouch to a Network

The **ENET 1** port is a standard 10/100/1000 RJ45 Ethernet connector and is used to exchange data and communicate with other devices in your router system.

- ★ Contact your IT department before connecting to your facility network to ensure that there are no conflicts. They will provide you with an appropriate value for the IP Address, Subnet Mask, and Gateway for your device.

The Ultritouch is connected directly to your network so that it can interface with the devices in your routing system. After a physical connection is established, use the DashBoard client running on your Ultritouch to configure the network settings for the Ultritouch.

- ★ Contact your network administrator if difficulties or problems are experienced when connecting the Ultritouch to a network hub, or with assigning IP addresses.

### To establish a physical connection to the network

1. Connect one free end of the straight through CAT5/5e/6 cable to a free port of the network hub.
2. Connect the other end of the same cable to **ENET 1** on the Ultritouch rear panel.

Figure 9 Ultritouch-2-HR — ENET 1 Connection

Figure 10 Ultritouch-4 — ENET 1 Connection

## Connecting to a Power Supply

The Ultritouch panel is powered by one +15V DC, 30W PSU, with an optional PSU available to provide redundancy and load sharing.

For redundancy, each power cord should be connected to a separate power source for protection against failure of the A/C power circuit. In the event of one power supply failure, the panel load is seamlessly transferred to the other connected redundant power supply.

**Warning Hazardous Voltages** — *The safe operation of this product requires that a protective earth connection be provided. This protective earth is provided by the ground conductor in the equipment's supply cord. To reduce the risk of electrical shock to operator and service personnel, this ground connector must be connected to an earthed ground.*

**Warning** — *In some countries it may be necessary to supply the correct mains supply cord. Use only certified cords for the country of use.*

### To connect the power cables to the Ultritouch panel

**Notice** — *The Ultritouch automatically powers on when power is applied.*

1. Connect the male end of the provided power cable into the socket marked **PWR1** on the Ultritouch rear panel.

**Note:** It is recommended that you always connect the Power Supply Unit to the Ultritouch-2-HR before connecting to Mains Power.

Figure 11 Ultritouch-2-HR — Primary Power Connection

**Note:** It is recommended that you always connect the Power Supply Unit to the Ultritouch-4 before connecting to Mains Power.

Figure 12 Ultritouch-4 — Primary Power Connection

2. Connect the remaining power cable into the **PWR2** power supply socket if redundancy is required.
3. Connect the supplied AC power cable into the power modules.
4. Connect the supplied power cable's three-prong male connector to an AC outlet.

# Configuring the Network Settings

The Ultritouch system comes pre-configured with default settings that you may wish to configure as per your facility requirements. This chapter outlines how to assign a static IP Address to the Ultritouch panel, and navigate the menu system of the touch-screen panel.

## Overview

Updating the network settings is the first task to accomplish once the physical installation is completed. There are two methods outlined in this chapter:

- **Walkabout** — use the Walkabout application, running on a DashBoard client computer in your network.
- **Ultritouch** — use the touchscreen of the Ultritouch hard panel.

## Using Walkabout to Assign the Ultritouch IP Address

Once the Ultritouch panel is physically installed and cabled to your facility network, you will need to assign it a static IP Address to enable DashBoard (running on a computer connected to the same subnet) to locate it on your network. Establishing a static IP Address enables the DashBoard client running on Ultritouch to detect other DashBoard Connect compatible devices on the same subnet.

### To assign a static IP address to the Ultritouch panel

1. Launch a DashBoard client from a computer connected to the same IP address subnet as the Ultritouch.
2. From the DashBoard client main toolbar, select **File > Show Walkabout**.  
The DashBoard window displays the **Walkabout** table.
3. Click **Refresh**, located at the bottom of the **Walkabout** tab, to ensure the list in the **Walkabout** table is current.
4. In the **Walkabout** table, find the entry for the Ultritouch you want to configure.  
★ It may be identified in the table via the default IP Address of 192.168.20.160.
5. Use the **Name** field to assign a unique identifier to the Ultritouch panel. This will be the name displayed in the Tree View of DashBoard.
- ★ After you edit a cell in the **Walkabout** table, the **Connection/Link Quality** value for the device reports 1%. It is recommended to wait approximately 1 minute, then click **Refresh** to apply the new settings.
6. Use the **Address** field to specify the IP Address supplied by your IT Department for this device.
7. Ensure the **Netmask** field is set to match your network requirements.
8. Use the **Gateway** field to specify the IP Address for connection outside of the local area network (LAN).
9. Click **Reboot** in the row of the **Walkabout** table for the Ultritouch.

## Adding the Ultritouch to the Tree View in DashBoard

Once you have assigned the Ultritouch a static IP address, you can then manually add it to the Tree View. Manually Adding the Ultritouch displays its node in the Tree View in the DashBoard client software on your computer, granting you access to the interfaces described in “**Menu System Overview**”.

### To manually add the Ultritouch to the Tree View in DashBoard

1. In the **Basic Tree View** toolbar of DashBoard, click .  
The **Select Equipment or Service Type to Add** dialog opens.
2. Expand the **openGear/DashBoard Connect** node.

3. Select **TCP/IP DashBoard Connect or openGear Device**.
4. Click **Next >**.  
The **TCP/IP DashBoard Connect/openGear Device** dialog opens.
5. Select the **JSON** radio button as the **Protocol**.

6. Enter the IP Address for the panel in the **IP Address** field that you assigned in the section “**To assign a static IP address to the Ultritouch panel**”.
7. In the text fields provided, enter the display name and the port of the panel you wish to add.
8. Click **Finish**.

The Ultritouch displays in the **Tree View**.

## Updating the Network Settings for the Ultritouch via the Hard Panel

You may wish to change the Ultritouch network settings from the default values yet do not have access to a computer running the Walkabout application. The touch-screen menu system enables you to change the IP Address and update other network settings. There are two methods to assign an IP address to the Ultritouch: manually assigning the settings or enabling the DHCP server in your network to assign the settings to the panel. Both methods are described below.

### To manually assign the network settings to the Ultritouch

1. Tap .

★ You will need to scroll through the menu list displayed under the Ross logo.

2. Tap **Network Settings**.

3. In the DHCP area, tap **Off**.
4. Use the **IP** field to assign a static IP Address to the Ultritouch.
5. Use the **Subnet** field to specify the subnet mask for your network.
6. Use the **Gateway** field to specify the gateway for communications outside of the local area network (LAN) that the Ultritouch will use.
7. Tap **Apply**.

### To automatically obtain the network settings for the Ultritouch

1. Tap .

★ You will need to scroll through the menu list displayed under the Ross logo.

2. Tap **Network Settings**.
3. In the DHCP area, tap **On**.
4. Tap **Apply**.

## Re-naming the Ultritouch

Each Ultritouch can be given a unique name that is used on internal menus and as the identifier in the routing system.

### To re-name the Ultritouch

1. Tap .
2. Tap **General Info**.
3. Select the **Device Name** field.
4. Type a new name for the Ultritouch in the **Device Name** field.
5. Tap **Apply**.

# Basic Navigation

There are two methods for accessing the Ultritouch menu system: via a DashBoard client running on a computer connected to the same subnet as the Ultritouch, or via the touchscreen of the hard panel. This chapter outlines both methods.

★ This chapter uses the Ultritouch-2-HR in its examples, but the information also applies to the Ultritouch-4.

## For More Information on...

- the menus and options in each interface, refer to “**Menu System Overview**”.

## Using the Touchscreen

The Ultritouch touchscreen menu system is organized into four interfaces: Ultritouch Device, All Connections, File Navigator, and Open Windows. Each interface is represented as a button on the left toolbar of the panel. Tap a button to display that interface on the touchscreen. **Figure 13** illustrates the user selecting the Network Settings button on the Ultritouch Device interface.

Figure 13 Example of Navigating the Ultritouch Touchscreen

Use this method of navigating the menu system to access:

- multiple device views
- custom panels
- Ultrix soft panels

## Navigating the Ultritouch Menus via the Touchscreen

The interfaces are accessed by tapping buttons on the main toolbar of the Ultritouch panel.

### To access the Ultritouch Device interface via the touchscreen

1. Tap .

2. To access additional menus:
    - a. Scroll through the menus using the arrows.
    - b. Tap a button to displays its interface.
- ★ Note that the button you tap now displays a blue bar on its right side.

### To access the All Connections interface

- Tap .

### To access the File Navigator interface

- Tap .

### To access the Open Windows interface

- Tap .

- ★ A maximum of 4 windows can be opened at one time. When the limit is reached, the panel with the earliest timestamp is automatically closed.

## Using a DashBoard Client Computer

The Ultritouch displays as a device node in the Basic Tree View in the window of your DashBoard client. Much like other DashBoard Connect devices, you access the interfaces and menus of Ultritouch by first selecting its node in the Basic Tree View to display a series of sub-nodes. Double-click a sub-node to displays its interface in the right pane of the DashBoard window.

Figure 14 Example of an Ultritouch Tree View in DashBoard

Ultritouch includes the following interfaces, as separate nodes, in the DashBoard Tree View.

- **Slot 0: Ultritouch** — Double-clicking the Slot 0 node displays the options for managing the devices communicating with the Ultritouch, loading custom panels, and configuring the network settings for the panel.

- **Slot 1: Ultritouch\_Uilities** — Double-clicking the Slot 1 node displays options for creating backups, enabling global services, and configuring the screen saver feature.

## Navigating the Ultritouch Menus via a DashBoard Client Computer

★ The DashBoard client computer must be connected to the same subnet as your Ultritouch panel.

### To access the Ultritouch interfaces via a DashBoard client computer

1. Launch DashBoard by double-clicking its icon on your computer desktop.
2. Ensure the DashBoard client computer is running DashBoard software version 9.16 or higher.

★ This information is available by selecting **Help > About DashBoard** from the main toolbar.

3. Locate the **Ultritouch** node in the Tree View of DashBoard.
4. Expand the **Ultritouch** node to display the Ultritouch sub-nodes.

Each sub-node is

5. Double-click the **Slot 0: Ultritouch** sub-node to display the Device interface.

The Device interface displays in the right-side of the DashBoard window. A toolbar at the bottom displays buttons for accessing the available settings. By default, the **General Info** tab is selected.

6. Double-click the **Slot 1: Ultritouch\_Uilities** sub-node to display the Ultritouch Utilities interface.

The Ultritouch Utilities interface displays in the right-side of the DashBoard window with three tabs at the top. By default, the **Backup** tab is selected.

# Configuring the Screensaver

A screensaver can reduce long-term wear of the panel LCD display, and is useful for privacy and aesthetics. The Ultritouch panel includes a screensaver feature that enables you to set the timeout value, specify an image or video file to display during the screensaver, and set the duration time for shuffling between images. This chapter outlines how to enable the screensaver feature for your Ultritouch touchscreen.

## Before You Begin

Keep the following in mind:

- By default, the screensaver uses a factory default video of Ross Video product images.
- It is important to choose the images and videos with care.
  - › For videos, use MP4 files with dynamic moving content.
  - › For images, it is recommended to use multiple images with content that varies from one image to the next so that no one area of the screen is permanently brightly illuminated. The screensaver image must be in a JPG or PNG format.
  - › Avoid large blocks of bright white.
- The amount of memory available for storing images and videos on the Ultritouch is limited. It is recommended not to upload more than 2GB.

## Enabling the Screensaver

This section outlines how to enable the screensaver feature and use the default settings.

### To enable the screensaver feature and use the default settings

1. Display the Ultritouch Utilities interface on your DashBoard client computer as outlined in “**To access the Ultritouch interfaces via a DashBoard client computer**”.
2. Select the **Screensaver** tab.
3. Set the **State** to **Enabled**.

4. Click **Apply**.

## Setting the Screensaver Timeout

This section summarizes how to specify the amount of time that must pass before the screensaver automatically starts (timeout).

### To set the timeout value

1. Locate the **Timeout** options on the **Screensaver** tab.
  2. Use the **Timeout** field to specify when the screensaver starts after inactivity.
- ★ The default is 10 minutes.
3. Click **Apply**.

## Uploading Images and Videos

This section outlines how to manage the images and video files available as the screensaver for your Ultritouch. Refer to **Table 1** for the recommended resolutions for each Ultritouch model.

**Table 1 Recommended Resolutions**

| Panel Model     | Resolution |
|-----------------|------------|
| Ultritouch-2    | 1366 x 203 |
| Ultritouch-2-HR | 1920 x 285 |
| Ultritouch-4    | 1366x485   |

### To upload image or video files for the screensaver

1. Click **Manage Files** (located at the bottom of the **Screensaver** tab).

The **Manage Files** dialog opens. The Manage Files dialog provides information on the name, size, and file type of uploaded files. In the following example, the table is blank because the user has not yet uploaded any files.

2. If the **Browse** and **Upload** buttons do not display:
  - a. Locate the **Upgrade & Support Access** area.
  - b. Click **Enabled**.

The **Browse** and **Upload** buttons now display.

3. Click **Browse...**

The **Open File** dialog displays.

4. Navigate to the first file you wish to upload.

5. Click **Open**.

The **Open File** dialog closes

6. Click **Upload** on the **Manage Files** dialog.

The **Manage Files** dialog updates to list the new file.

7. Repeat steps 3 to 6 for each additional file you wish to add.

8. Click **Done**.

The **Manage Files** dialog closes.

#### To select a new file for the screensaver

1. Click **Refresh** (located beside the **Screensaver** menu).
2. Click the **Screensaver** menu to display a list of available uploaded image/video files.
3. Select the required file.
4. If you selected Image Slideshow:
  - a. Locate the **Image Duration** options on the **Screensaver** tab.
  - b. Use the **Image Duration** field to specify the amount of time to display each image to create an image slideshow. Images in your screensaver folder will shuffle and loop automatically. It is recommended to use a lower value (a short duration) so that an image does not display for long.
5. Click **Apply**.

#### To preview the screensaver

1. Click **Activate** on the bottom of the Ultritouch Utilities window.  
The Ultritouch panel touchscreen displays a preview of the screensaver mode.
2. Tap the Ultritouch panel touchscreen to cancel the preview.

# Communications with Devices

This chapter provides a general procedure for creating a connection point between the Ultritouch and external devices in your routing system. The specific steps for your devices may differ than what is presented here.

- ★ The procedures in this chapter assume you are navigating the Ultritouch menus via the front touchscreen (hard panel).

## For More Information on...

- the menu system, refer to “**Menu System Overview**”.
- creating a connection point between the Ultritouch and your device, refer to the ***Ultrix and Ultricore Database Guide***.

## Before You Begin

The Connected Devices interface lists external devices that the Ultritouch detects and can connect to, and provides status information. You can also disconnect communications between a device from Ultritouch. There are two methods for adding an external device to the Ultritouch: using the auto connect feature or manually adding a device by specifying the IP address of the device. Both methods are described in this chapter.

- ★ You can also drag and drop devices nodes from the Basic Tree View to the Ultritouch Connected Devices tab in a DashBoard client. Refer to the ***Ultritouch Quick Start Guide*** for details.
- ★ This chapter uses the Ultritouch-2-HR in its examples, but the information also applies to the Ultritouch-4.

## Automating Connections

There are two features that you can use to auto detect and connect to external devices in your routing system.

### Using the Auto Detect Feature

By default the Ultritouch auto detects any external device on the same IP subnet. Ultritouch queries the network for new devices approximately every 10 seconds if the Automatic Detection feature is enabled.

#### To enable the Ultritouch to auto detect external devices in your routing system

1. Tap .
2. Tap **Connected Devices**.
3. Tap **Enable Auto Detect**.

### Using the Auto Connect Feature

The auto connect feature is independent from the auto detect feature. This allows you to still manually select what devices to connect to. Once the auto connect feature is enabled, Ultritouch will automatically create a connection point to devices listed in the Connected Devices table.

#### To enable the Ultritouch to auto connect to external devices in your routing system

1. Tap .
2. Tap **Connected Devices**.

3. Tap **Enable Auto Connect**.

## Manually Connecting to an External Device

You must manually create a connection point to an external device when the device is on a different subnet from your Ultritouch.

If the Auto Detect or Auto Connect options are disabled, you can still create a connection point to an external device by manually specifying their IP address in the Ultritouch Device interface.

### To manually add a connection point to an external device

1. Tap .
2. Tap **Connected Devices**.
3. Tap **Add**.
4. Tap **Manually Add a Connection Point**.
5. Use the **Device IP/Hostname** field to specify the IP Address for the external device.
6. Tap **Add Device**.  
The device is now listed in the **Connected Devices** table.
7. Select the device from the **Connected Devices** table.
8. Tap **Connect**.

## OGP and JSON Connections

This section outlines how to establish a connection point when your device communicates over TCP via the openGear protocol (**OGP**) or the JavaScript Object Notation (**JSON**).

### To manually add a connection point to an external device via OGP or JSON protocol

1. Tap .
2. Tap **Connected Devices**.
3. Tap **Add**.
4. Tap **TCP/IP DashBoard Connect/openGear Device**.
5. Use the **Device IP/Hostname** field to specify the IP address for the external device.
6. Use the **Device Name** field to specify the device name (as you want it to appear in the Ultritouch interfaces).
7. Use the **Protocol** menu to specify whether the device communication language.
8. Use the **Port** field to specify the port on the device used for communicating with the Ultritouch.
9. Select the **Remember connection settings** for this device to retain the settings after a loss of communication.
10. Tap **Add Device**.
11. Select the device from the **Connected Devices** table.
12. Tap **Connect**.

# Using with Ultrix

This chapter covers the installation, configuration, and use of the Ultritouch with your Ultrix router.

## For More Information on...

- databases, refer to the ***Ultrix and Ultricore Database Guide***.

## Before You Begin

Keep the following in mind when managing your Ultrix soft panels for Ultritouch:

- Soft panels require the setup of the database source/destinations/levels and port assignment to be complete on the Ultrix router that will communicate with Ultritouch.
- If the Ultrix database changes (source/destination/level/salvo addition or deletion), you will need to:
  - › update the Ultritouch soft panel configuration in the Ultrix database to ensure the correct elements are visible;
  - › re-load the soft panel to the Ultritouch.
- Soft panels do not support Unicode characters.

## Configuration Workflow

Refer to **Figure 15** for an overview of the steps required before establishing communication between the Ultritouch and an Ultrix router.

*Figure 15 Example Workflow for Setting Up an Ultrix Before Connecting to an Ultritouch*

Refer to **Figure 16** for an overview of the steps required to enable your Ultritouch to communicate with an Ultrix router.

*Figure 16 Example Workflow for Setting Up an Ultritouch to Communicate with an Ultrix*

## Configure the Ultrix Database

A database defines the matrices, levels, sources, destinations, and soft panel for a particular router setup. A router may use a number of database configurations depending on its role in the routing system.

## For More Information on...

- creating and managing databases for an Ultrix router, refer to the ***Ultrix and Ultricore Database Guide***.

## Create the Ultritouch Soft Panel in the Ultrix Database

A soft panel provides Ultritouch access to the sources, destinations, levels, and/or salvos that are available on the associated Ultrix router. The soft panel configurations are part of the Ultrix database so any instance of DashBoard or Ultritouch connecting to a given router has the defined soft panels available.

A soft panel is also a software implementation of a physical remote control panel (RCP). You can customize an Ultritouch soft panel by defining the sources, destination, levels, and/or salvos that will be available for use on the panel interface. A soft panel designed for Ultritouch also enables you to customize the look of the interface when it is loaded to the Ultritouch panel.

★ An Ultritouch soft panel is created using the options in the Ultrix menu system.

### For More Information on...

- soft panels in databases, refer to the ***Ultrix and Ultricore Database Guide***.

## Set up Communications between the Ultritouch and the Ultrix

Communication between Ultritouch and the Ultrix router is over ethernet via an established connection point. A connection point defines the interface and the protocol to be used for communication.

Ultritouch uses the open SLP protocol to locate devices on the same network as it is connected to. There are two methods to setting up communications between the Ultritouch and Ultrix/Ultricore: using the auto-connect feature or manually adding the router by specifying its IP address.

### To set up a connection point between Ultritouch and Ultrix/Ultricore

1. Tap .

2. Tap **Connected Devices**.

★ This may also be accessed via a DashBoard client computer and navigating to the Ultritouch Device > Device Options interface.

3. Tap **Add**.

4. Tap **Manually Add a Connection Point**.

5. Use the **Device IP/Hostname** field to specify the IP Address for the Ultrix router.

6. Tap **Add Device**.

The router is now listed in the **Connected Devices** table.

7. Select the router from the **Connected Devices** table.

8. Tap **Connect**.

## Creating an Ultritouch Soft Panel

Creating a new soft panel, or editing an existing soft panel, requires you to work within the Ultrix database menu system. Before proceeding:

- create and load the required database to the Ultrix router;
- be familiar with using the Soft Panel Editor in the Ultrix menu system.
- ensure the soft panel you are editing is not currently loaded on an Ultritouch.

### For More Information on...

- databases, refer to the ***Ultrix and Ultricore Database Guide***.

## Loading an Ultritouch Soft Panel to Ultritouch

The main toolbar on the Ultritouch provides a method for navigating to the soft panels available in your routing system. Loading a soft panel to an Ultritouch is similar to loading a soft panel to an Ultrix router or Ultricore Central Controller: from the main toolbar you locate the soft panel in the Panel tree of the database (panels are listed in a hierarchy as determined by Panel ID), and open it.

- ★ Do not load a soft panel that is not designed specifically for an Ultritouch. A soft panel, other than one designed using the Ultritouch PB template, may not display correctly on the Ultritouch screen.

## Using an Ultritouch Soft Panel

The layout of an Ultritouch soft panel automatically organizes the destinations, sources, and levels into distinct columns of buttons. Refer to **“Elements of an Ultritouch Soft Panel”** for more information.

# Soft Panels Operation

A soft panel can be as simple or complex in its layout as you require. This chapter briefly summarizes how to load and operate a soft panel using the Ultritouch touchscreen.

★ Refer to the **Ultrix and Ultricore Database Guide** for more information on creating soft panels in your database.

## Elements of an Ultritouch Soft Panel

To control an Ultrix router via Ultritouch, load a saved soft panel using the Ultritouch > All Connections interface. Loading a soft panel to Ultritouch requires a similar method as loading a soft panel in the Ultrix and/or Ultricore menu system. You select the device in the Ultritouch > All Connections interface, navigate to the specific soft panel you wish to load, and select it from the provided list. Soft panels are listed in a hierarchy as determined by their Panel ID.

★ The layout of the soft panel depends on how it was configured in the Ultrix Panel Editor. The order of the windows in the soft panel is determined using the options in the Home View tab. Refer to “**Defining the Home Page of the Soft Panel**” for details.

Figure 17 Example of an Ultrix Soft Panel Loaded to an Ultritouch

### 1. Main Toolbar

This toolbar is fixed to the left side of the soft panel as part of the Ultritouch window and provides navigation buttons to access custom panels, connected devices, and file management.

### 2. Home Page

This area is the Home Page of the soft panel and displays the windows defined during the soft panel configuration. By default, the Ultritouch PB soft panel template includes two drawers (3), a Destination window (4), a Sources window (5), and an Operations window (7). **Figure 17** shows a customized soft panel that also includes a Status window (6) and an Output Monitor window (8). Each of these elements are summarized below.

### 3. Drawers

A navigation drawer is available on the left and right sides of the interface. Tap the drawer icon once to open a pane that provides access to additional menus and functions of your soft panel. Tap the drawer icon again to close the pane. The contents of a drawer is determined when the soft panel was configured.

### 4. Destination Window

Each button in this area represents a configured output for the selected router. Tap a button to include the destination in the next crosspoint switch. For example, **Dest1** is selected in **Figure 17**. Note that the number of destinations and the button labels are defined in the Ultrix > Database > Destinations interface. The icon used on the button type (e.g. the headphone icon is used in **Figure 17**) is specified during the soft panel configuration.

## 5. Sources Window

Each button in this area represents an input in the routing system. Tap a button to include the source in the next crosspoint switch. For example, **Src12** is selected in **Figure 17**. Note that the number of sources and the button labels are defined in the Ultrix > Database > Sources interface. The icon used on the button type (e.g. the camera icon is used in **Figure 17**) is specified during the soft panel design.

## 6. Status Window

Tap a level button to include that level in the next crosspoint switch. Note that the number of levels and the button labels are defined in the Ultrix > Database > Levels interface. This window also displays the status of crosspoint selections. In **Figure 17**, **Dest2** is selected for the next crosspoint switch.

## 7. Operations Window

This window of the soft panel groups operational features as defined when creating the soft panel. The following buttons can be located in this window:

- › **LOCK** — This button displays when the **Protection Operation** was set to **Enable** during the soft panel design. Tap this button to prevent switching of the selected destination by any control device.
- › **PROTECT** — Tap this button to prevent switching of the selected destination except by the panel that initiated the protect. If you are using a soft panel with the **Protection Operation** set to **Disable**, the **PROTECT** button is not displayed.
- › **FOLLOW** — Tap this button to automatically select all the Level buttons listed on the soft panel (buttons are now lit). All levels are included in the next crosspoint selection.
- › **VIEW** — Tap this button to display a list of presets that will be included in the next crosspoint switch.
- › **CLEAR** — Tap this button to clear the selections made for the next crosspoint switch on the soft panel.
- › **PRESET** — Tap this button to create a temporary list of multiple crosspoint switches that will be executed on the next transition.
- › **TAKE** — Tap this button to execute the switch between the selected crosspoints. The soft panel does not display this button if the **Take Operation** was set to **Direct** during the soft panel design. Transitions will occur automatically after a crosspoint switch is selected.

This window also includes a read-only status field, located at the top of the window, that reports the currently selected destination.

## 8. Output Monitor Window

This area provides a thumbnail preview window of the next crosspoint switch. Refer to “**Using the Output Monitor Window**” for more information.

## Accessing the Operations Features

The Operations window can be a fixed window on the soft panel, or assigned to a specific Drawer. **Figure 18** shows a soft panel with an Operations window. The buttons available in the Operations window depend on the options enabled when the soft panel was configured. Refer to “**Operations Window**” for details.

Figure 18 Example of a Soft Panel with the Operations Window on the Right

## Filtering the Destination and Source Buttons

You can search the entries in the Destination and Source windows using the options in the Filters window. This is helpful when your database includes a large number of inputs and outputs and you wish only to access specific ones. Use the provided search fields to filter the entries in each window. (Figure 19)

Figure 19 Example of a Soft Panel with the Filters Window on the Right

## Creating an Ultritouch Soft Panel

The Ultrix Soft Panels Editor enables you to specify the number of destinations, sources, levels, and salvos displayed on your panel. You specify the elements of the soft panel, such as what windows and additional menus to display and their order on the soft panel, and give the panel a unique name to make it easier to identify in your system. This section outlines how to create a soft panel (Ultritouch PB) specifically designed for use on an Ultritouch using the Ultrix Soft Panels Editor in Dashboard.

Much like other types of soft panels, when you create a new Ultritouch PB soft panel, you select from an existing soft panel type (templates). You then assign a Panel Name and ID to display in the tree view using the nomenclature "Panel Name [#]" where [#] is the Panel ID.

Creating a new soft panel, or editing an existing soft panel, requires you to work within the Ultrix database menu system.

### For More Information on...

- creating a soft panel, refer to the ***Ultrix and Ultricore Database Guide***.

## Specifying the Levels for the Soft Panel

You can specify the total number of levels available on the soft panel to the user. For example, if you set the Viewable levels to 6 but have assigned 8 levels to the panel, only the first six levels in the Assigned list are displayed. You can also specify the order in which the levels are displayed on the soft panel.

## Specifying the Destinations for the Soft Panel

You can create a soft panel with a specified number of destinations and determine the order in which they are displayed in the Destinations window of the panel. For example, the router may have 32 destinations but you only want to make the first 4 outputs selectable on the soft panel. You would then move only the required destinations from the Available list to the Assigned list.

## Specifying the Sources for the Soft Panel

You can create a soft panel with a specified number of sources and determine the order in which they are displayed in the Sources window of the panel. For example, the router may have 64 sources but you only want to make the first 12 inputs selectable on the soft panel. You would then move only the required sources from the Available list to the Assigned list.

## Defining the Home Page of the Soft Panel

When creating an Ultritouch soft panel, you also have the option to customize the different areas (windows) of the panel, and determine the width of each window, drawer, and their elements. A Home Page can be a collection of windows as defined during the soft panel configuration using the options in the Panels > Home View tab.

A soft panel is organized into distinct windows, each with a specific function. The number and type of windows your soft panel includes is determined during its configuration. **Figure 20** shows a soft panel with three windows (from left to right): Destinations, Sources, and Operations.

Figure 20 Example of a Soft Panel with Three Windows

**Table 2** summarizes the options for the types of windows you can assign to the Home Page.

**Table 2 Home Page — Types of Windows**

| Window Type    | Description                                                                                                                                                                                          |
|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Category/Index | Displays a Category-Index style of window on the soft panel.                                                                                                                                         |
| Destinations   | Displays the destination selection buttons.                                                                                                                                                          |
| Favorites      | Adds a window of configurable sources, destinations, crosspoints, groups, and salvos.                                                                                                                |
| Filters        | Displays text filter to find source/destination. For example, the entered text <code>dest</code> will find all source or destination labels that include <code>dest*</code> and <code>Dest*</code> . |
| Groups         | Displays a Group Categories style of window on the soft panel.                                                                                                                                       |
| MV Heads       | Refer to “ <b>Multiviewer Operation</b> ”.                                                                                                                                                           |
| MV Layouts     |                                                                                                                                                                                                      |
| MV Pips        |                                                                                                                                                                                                      |
| Operations     | Adds a window that organizes the functions for router control (TAKE, Protect, etc) into buttons as defined using the <b>Info</b> tab.                                                                |
| Output monitor | Adds a window that displays a a thumbnail of video.                                                                                                                                                  |
| Presets        | Displays the source/destination/level switch combinations that are cued for crosspoint control.                                                                                                      |
| Salvos         | Adds a window that displays buttons representing the available salvos.                                                                                                                               |
| Sources        | Displays the defined source selection buttons.                                                                                                                                                       |
| Status         | Displays the level selection window and current multilevel status.                                                                                                                                   |

The options for defining the Home Windows elements of a soft panel are arranged in a table format of the Home View tab. You can chose to use the default settings, or customize the width and number of rows/columns in each window independently.

★ The order of the rows in the **Home Windows** table determine the order of the windows that display on the soft panel. For example, if the first row is assigned to Sources, the first window next to the main toolbar of the soft panel will display the Sources buttons.

## Defining the Drawers on a Soft Panel

Soft panels to control an Ultrix can also include fly-out menus (drawers) that operate like horizontal drop-down menus. You can specify what menus, functions, and settings each drawer includes.

Depending on how you configured your soft panel, some features may be only accessed by tapping a Drawer on the soft panel. A Drawer may also display as an overlay of other windows.

**Figure 20** includes two drawers: one on the far left of the soft panel, and one on the far right. When a Drawer is tapped, the arrow on the drawer points in the opposite direction. Tapping a Drawer displays additional buttons available for selection (**Figure 21**), or windows. (**Figure 22**)

Figure 21 Example of a Drawer Displaying Additional Menu Options on the Left

Figure 22 Example of a Drawer Displaying Additional Menu Options on the Right

### For More Information on...

- defining the drawer elements of a soft panel, refer to the ***Ultrix and Ultricore Database Guide***.

## Loading a Soft Panel on Ultritouch

Loading a soft panel for a router via the Ultritouch menu system is similar to loading it from the Ultrix router tree in DashBoard. You first select the specific router and then navigate to the panel file defined in “**Creating an Ultritouch Soft Panel**”. Except on the soft panel, the navigation options are displayed as buttons (and not tree nodes).

### To load a soft panel on Ultritouch

1. Tap .

The **All Connections** interface displays.

2. Tap the router you want to control via Ultritouch.

In the following example, the `Ultrix_140` router was selected.

3. Tap the second button.

The panel updates to display the router hierarchy much like the tree view in the router menu system.

- ★ Notice that the top toolbar reports where a breadcrumb trail reports your location in the menus. You can return to a previous menu by tapping **< Back**.

4. Tap **Soft Panels**.

A list of available soft panels displays.

5. Tap the required soft panel for the Ultritouch.

6. Tap **Open**.

The Ultritouch interface updates to display the selected soft panel.

## Switching with a Level, Destination, and Source

The Ultritouch soft panels are destination driven: you must first select a destination and then select the required source to be routed.

### To make a crosspoint switch

1. Load a soft panel to the Ultritouch as outlined in the procedure **“To load a soft panel on Ultritouch”**.

2. Tap the button for each level that you want to use.

- ★ You may need to first tap a Drawer to display the **Status** window which includes the Level buttons.

3. Tap the **Destination** button to include in the switch.

4. Tap the **Source** button that you want to include in the switch.

5. If available, tap **TAKE**.

- ★ If the **Take** mode was set to **Automatic**, crosspoint switches are performed automatically and the **TAKE** button does not display. Refer to **“Adding Operation Features to the Soft Panel”** for details on setting this mode.

- If you want to protect the destination or prevent other users from changing the source selection, tap **PROTECT**.

## Using Presets

A preset is a temporary list of crosspoint switches. Presets may be used to cue up a number of different crosspoint switches, then execute them all with one take command. Before proceeding, ensure that a Preset window is defined in the soft panel.

- ★ The **Take** mode must be set to **Confirm** for presets to work. Refer to “**Adding Operation Features to the Soft Panel**” for details on setting this mode.

### To use a preset

- Load a soft panel to the Ultritouch as outlined in the procedure “**To load a soft panel on Ultritouch**”.
- Tap the **Destination** button to include in the switch.
- Tap the **Source** button that you want to include in the switch.
- Tap **PRESET**.

- ★ You may need to first tap a Drawer to display the **Preset** window.

- Repeat steps 2 to 4 as needed.
- Tap **TAKE** to execute all switches.

### To view the preset list

- Tap **VIEW**.

The Preset list includes individual switches for every level that was including in the original selection.

### To clear the preset list

- Tap **CLEAR**.

## Editing the Preset List

The Preset list all the individual levels of the switch requests currently in preset queue. Individual levels may be removed from the preset queue by selecting the switch request and tapping **CLEAR** in the Preset window.

### To edit the preset list

- Perform one of the following:
  - Tap **VIEW** on the Operations window; or
  - Expand the applicable drawer to display the **PRESET > VIEW** button.
- Tap individual crosspoints.
- Tap **CLEAR** on the Preset window.

## Using Salvos

Salvos are a selected series of crosspoints to switch in the routing matrix that are saved and later recalled for use. A soft panel that includes a Salvos window provides access to the configured salvos in your routing system.

### For More Information on...

- creating salvos in your database, refer to the ***Ultrix and Ultricore Database Guide***.

## Recalling a Salvo

Once you have created and saved your salvos, and created a soft panel with a Salvos window, you can recall each salvo from the Ultritouch.

### To recall a salvo from Ultritouch

1. Load a soft panel to the Ultritouch as outlined in **“To load a soft panel on Ultritouch”**.
2. Tap the button for the salvo you wish to recall.

## Using Favorites

Before proceeding ensure that:

- one or more Favorite button is defined as outlined in **“Adding a Favorite Button”**.
- a Favorite window is accessible as defined on by the Home View configuration tab.

### To use favorites

1. Load a soft panel to the Ultritouch as outlined in **“To load a soft panel on Ultritouch”**.
2. Tap the desired button from the **Favorite** window on the soft panel.
3. If the selected favorite is a source, crosspoint, or salvo, the soft panel **TAKE** configuration setting is honored;
  - if the **TAKE** operation is set to confirm via soft panel configuration, the **TAKE** button (on operations window) must be tapped to send the switch request to the router.
  - if the **TAKE** operations is set to direct, the switch request is sent immediately upon selecting the required favorite.

## Using the Output Monitor Window

★ This feature requires that the Ultrix router run software 3v31 or higher.

### For More Information on...

- creating and managing databases for your routing system, refer to the ***Ultrix and Ultricore Database Guide***.

The **Output Monitor** window requires:

- you to be familiar with the Ultrix feature called Destination Follow for standard destinations (outputs).
- a third-party video Codec box downstream to the router. Contact Ross Technical Support for a list of supported boxes.

Figure 23 Example of Physical Connections for an Output Monitor Window

## Configuration Requirements

Configuring the Output Monitor window for an Ultritouch PB soft panel requires the following:

1. Configure a destination on the Ultrix router to feed the third-party video Codec box. Refer to the **Ultrix and Ultracore Database Guide** for details on configuring destinations in a database.
2. Configure the third-party video Codec box to convert video to an IP thumbnail. Refer to the documentation that accompanied your box for details.
3. Decide whether the Output Monitor will be controlled via a standard destination-source selection, or via the Destination Follow mode.
  - The Destination Follow mode allows a user to press any destination button, and the Ultritouch output monitor will update to show the current source on that destination.
  - The Destination Follow selection requires that a destination name be entered on the Ultritouch soft panel Home View setting, and that the output monitor is defined as a viewable window on the Ultritouch soft panel.
  - The Destination Follow table in the Ultrix database does not need to be configured for this function. The destination follow table will automatically be populated when the user selects a destination button.
4. On the Ultrix router, configure a new Ultritouch PB soft panel ensuring to:
  - Use the **OM Address** field to specify the IP address or named resource of the third-party video Codec box.
  - Use the **OM Destination** field to specify the Destination the Codec is connected to.
  - Add an Output Monitor window to the soft panel (either on the Home Windows or as a Drawer feature).
5. Load the soft panel to the Ultritouch.

In this example, the Output Monitor window displays on the far-right side of the soft panel.

# Multiviewer Operation

This chapter outlines how to design and use an Ultritouch MV soft panel type for Multiviewer control via the Ultritouch.

★ This feature is not supported when the router is in a system that is controlled by an Ultracore BCS.

## Before You Begin

Ensure the following are completed:

- At least one Ultriscape license key is installed for your router.
- At least one Ultriscape Head is enabled (via the Frame Configuration interface) on the router.
- Configure the Ultriscape Heads and PiPs in your router database.
- Assign each Ultriscape Head to a layout.

### For More Information on...

- configuring and managing the Ultriscape Heads for a router, refer to the ***Ultriscape User Guide***.

## Soft Panel Overview

The Ultritouch MV Soft Panel enables you to control Multiviewer layouts, switch PiPs, and modify follow/non-follow modes directly from the Ultritouch panel. This section briefly summarizes the areas and windows on a typical Ultritouch MV Soft Panel.

Figure 24 Ultritouch MV Soft Panel — Layout Mode

Figure 25 Ultritouch MV Soft Panel — PiP Mode

### 1. Head Selection Area

When the panel is in Layout mode (**LAYOUT** is tapped), this area displays the available Ultriscape heads. Tap a head icon to select (**Figure 24** shows slot 4 Head 1 as selected). Items that have a gray background are not selectable as they are not configured in the Ultrix database

### 2. Layout Selection Area

When the panel is in Layout mode (**LAYOUT** is tapped), this area displays the available layouts as configured in Ultrix. Tap a head icon to select from the head selections area, then select a layout to switch the head layout. The current selection is shown with a green outline. **Figure 24** shows that the first available layout is selected.

### 3. Control Area

This column of buttons enables you to select an element of an Ultriscape Head to display in the soft panel.

- › **LAYOUT** — tap this button to display the MV Layouts options.
- › **PIP** — tap this button to select display the MV PiPs options.
- › **APPLY** — tap this button to apply any changes made to the Ultritouch MV soft panel.
- › **TAKE** — tap this button to perform a crosspoint switch.

### 4. Sources Area

Each button in this area represents an input in the routing system. Tap a button to include assign the source to the currently selected PiP.

### 5. Right Drawer

A navigation drawer is available on the right sides of the Ultriscape MV soft panel. Tap the drawer icon once to open a pane that provides access to the Destinations Follow window. Tap the drawer icon again to close the pane.

### 6. Head Preview Area

When the panel is in PiP mode (**PIP** is tapped), this area displays a preview of the selected layout.

### 7. PiP Selection Area

When the panel is in PiP control mode (**PIP** is tapped), this area displays the available PiP destinations. Tap a PiP destination button to select, then select a source from the sources area to switch the PiP source.

## Creating a Soft Panel for Multiviewer Operation

Much like other types of soft panels, when you create a new Ultritouch MV soft panel (**Ultritouch MV**), assign a Panel Name and ID to display in the tree view using the nomenclature “Panel Name [#]” where [#] is the Panel ID.

The **Ultritouch MV** panel style enables you to control Multiviewer layouts, switch PiPs, and modify follow/non-follow modes directly from an Ultritouch touchscreen. This option is not supported when the router is in a system that is controlled by an Ultricore.

Refer to the ***Ultrix and Ultricore Database Guide*** to configure the required elements of the Ultritouch MV soft panel:

- Operation Features
- Levels
- Destinations
- Sources
- Salvos

### Home View of an Ultritouch MV Soft Panel

By default, an Ultritouch MV soft panel is automatically configured to display the following:

- **MV Heads** — provides access to the Ultriscape Head Selection options of the connected router. Use this window to switch between the heads that are enabled on the router.
- **MV Layouts** — provides access to the Ultriscape Layout Editor of the connected router. Use this window to switch between layouts saved to the router database.
- **MV Pips** — provides access to the defined Ultriscape PiPs of the connected router. Use this window to switch between configured PiPs.

- **Sources** — provides access to the available sources in the current database of the router.

★ The **Destination Follow** drawer is not implemented.

#### For More Information on...

- customizing your soft panel, refer to the *Ultrix and Ultricore Database Guide*.

## Using an Ultritouch MV Soft Panel

There are three basic functions of an Ultritouch MV soft panel: layout control, PiP selection, and enabling a PiP to follow a destination. This section briefly outlines the elements of an Ultritouch MV soft panel and how to perform these basic functions.

★ If communication is lost between the Ultritouch and the router, changes made during run-time on the Ultritouch MV Soft Panel are not retained.

### Layout Control

Each Ultriscape Head in your system can use the same layout, or different layouts depending on your needs. Both instances share the same layout properties, but can have different sources assigned to each PiP. The list of available sources to assign to each PiP depends on the currently loaded database for the Ultritouch router.

#### To change the layout loaded to a specific Ultriscape Head

1. Load the soft panel as outlined in “Loading a Soft Panel on Ultritouch”.
2. In the MV Heads window, tap the Ultriscape Head you want to control.
3. In the **Control** window, tap **LAYOUT**.
- ★ Inactive Ultriscape Heads are grayed out and may not be selected for control.
4. In the MV Layouts window, tap the layout from the **MV Layouts** window.

The selected layout displays with a green border around its thumbnail.

5. Tap **Apply** to confirm your selections and change the layout from the selected Ultriscape Head.

### PiP Selection

A PiP source is controlled by routing just like any destination. Each PiP in a layout is assigned a video signal from the Head Selection interface. If the input signal includes embedded audio, the audio is included in the Ultriscape Head output.

#### To change the source for a PiP

1. Load the soft panel as outlined in “Loading a Soft Panel on Ultritouch”.
2. Select a layout as outlined in “To change the layout loaded to a specific Ultriscape Head”.
3. In the **Control** window, tap **PIP**.
4. In the **MV Pips** window, tap the PiP you want to control.
5. In the **Sources** window, tap the source that you want to use for the selected PiP.
6. Tap **Apply** to confirm your selections and change the PiP Source.

# Using Categories

This chapter outlines how to use an Ultritouch soft panel that includes Category Index and Group Category elements to perform crosspoint switches on an Ultrix router.

## Using Category/Index Mode

Category/Index mode allows alpha-numeric extensions to labels to “build up” the final label selection. Destination and source names are split into substrings - the first substring is referred to as the *category* and the subsequent substrings as the *indexes*. Once the Cat/Index categories are defined, the user can perform switches on the Ultritouch based on these categories.

### Before You Begin

Before you can load a soft panel with Category Index elements, you must first:

1. Assign categories within the database.
2. Assign indexes within the database.
3. Configure an Ultritouch soft panel to include a Category Index window.

### For More Information on...

- on assigning categories and indexes, refer to the ***Ultrix and Ultricore Database Guide***.

## Soft Panel Overview

**Figure 26** provides an example of an Ultritouch soft panel with a Category Index window and buttons.

Figure 26 Example of a Default Category/Index Soft Panel Layout

### 1. Category Index Window

This window provides access to the Destination and Source buttons for selected categories and indexes defined in the Ultrix database. The buttons that display in this window change depending on whether the DEST or SRC button was tapped. In **Figure 26**, the user tapped **SRC**, and the Category Index window displays buttons assigned to the Source category.

A Category Index window is added to an Ultritouch PB soft panel during configuration as outlined in “**Defining the Home Page of the Soft Panel**”.

### 2. Status

This area reports the current selection (Dest and Src).

### 3. Button Paging

Tap these buttons to scroll up/down the window.

## 4. Operations Window

The Operations window includes the following buttons for Category/Index mode:

- › **DEST** — Tap this button to display the Destination category buttons in the Category Index window.
- › **SRC** — Tap this button to display the Source category buttons in the Category Index window.
- › **BACK, CLEAR** — Use these buttons to back up one step and clear current selections respectively.
- › **SELECT** — Tap this button to confirm your crosspoint choices. This button is only available when the **SRC** and **DEST** selections are valid.

## Creating a Soft Panel for Category/Index Mode

Creating a soft panel for operating an Ultrix router in Category/Index mode requires the same basic steps as other soft panels except you set the Window type to

### For More Information on...

- creating a new Ultritouch soft panel with a Category/Index window, refer to the ***Ultrix and Ultracore Database Guide***.

## Using Category/Index Mode

- ★ The categories and indexes must be defined in the Ultrix router database before Ultritouch can control the router using Category/Index mode.

### To make a crosspoint change

1. Load a soft panel, configured for Category/Index mode, to the Ultritouch as outlined in the procedure **"To load a soft panel on Ultritouch"**.
2. To select a destination:
  - a. Tap **DEST**.
  - b. Tap a Destination category.

3. Tap a Destination Index.

4. Tap **SELECT** to confirm your destination choice.

- ★ The **SELECT** button is only enabled when the selections made in steps b and 3 are valid.

The panel enters Source Selection mode.

5. Select the Source Category.

6. Select the Source Index.

- **TAKE** becomes available when the navigation results in a valid source selection.
- **PRESET** may also be used to add multiple switches to a **PRESET** cue. The **PRESET** cue can be then executed with a single **TAKE** command.

7. Tap **TAKE** to send the switch request to the router.

## Using Group Categories

Group categories allow arbitrary grouping of source and destination names. These groupings are fully customizable to suit your particular workflow.

### Before You Begin

Before you can load a soft panel with Group element, you must first:

1. Define the group categories within the database. Refer to the ***Ultrix and Ultracore Database Guide***.
2. Configure an Ulritouch soft panel to include a Group window. Refer to the ***Ultrix and Ultracore Database Guide***.

### Soft Panel Overview

**Figure 27** provides an example of an Ulritouch soft panel with two group categories defined as EDIT 1 and EDIT 2. Both contain various source and destination names. EDIT 1 also contains a sub-group.

Figure 27 Example of a Default Soft Panel Layout with a Group Window

### 1. Title Bar

If enabled, a title bar will be displayed top most of the screen. The current group navigation will be displayed as a breadcrumb style upon entering any group.

### 2. DEST Mode Button

Select this button to show only destinations from any group.

### 3. SRC Mode Button

Select this button to show only sources in any group.

### 4. LEV Mode Button

Select this button to show only levels in any group.

### 5. TOP Button

Select this to navigate to the top most group.

### 6. BACK Button

Select this to navigate back on step in the group hierarchy.

### 7. Central Area

The central/main area of the screen displays the groups and any configured source, destination, and level buttons. The Groups are identified by the folder icon.

- ★ A group category is only visible if it contains defined contents for the current mode selected. For example, if the current select mode is DEST, and group EDIT 2 contains no destinations, then the EDIT 2 group will not be navigable in DEST mode.

## Using Group Categories on a Soft Panel

This section outlines how to perform a simple crosspoint switch via a soft panel using Group categories. There are three steps you must perform before sending the switch request to the router:

1. Select the required level(s) using one of the following methods:
  - using the group category defined levels, or
  - using the status window
2. Select the required destination.
3. Select the required source.

### To select the required levels for the operation

- Using the group category defined levels:
  - a. Tap **LEV**.
  - b. Tap the required level(s).
 

A selected level will highlight blue. To de-select, tap again.
- Using the status window:

- a. Open the status window (if needed)
- b. Tap the required level(s).

★ Omitting a level selection will mean the switch request will use the current level selection from a previous operation.

#### **To select the required destination**

1. Tap **DEST**.
2. Navigate to the group.
3. Tap the required destination.

#### **To select the required source**

1. Tap **SRC**.
2. Navigate to the group.
3. Tap the required source.

#### **To perform the switch**

- If the **TAKE** operation is set to **Confirm** via soft panel configuration, the **TAKE** button (on the Operations window) must be tapped to send the switch request to the router, or
- If the **TAKE** operations is set to **Direct**, the switch request is sent immediately upon selecting the required source.

# File Management

This chapter outlines how to use the File Navigator interface to load your custom panel and device files to the Ultritouch.

- ★ This chapter uses the Ultritouch-2-HR in its examples, but the information also applies to the Ultritouch-4.
- ★ A connection must be established between Ultritouch and the device that you are uploading the file to. Refer to “**Communications with Devices**” for details.

## Loading Custom Panels

The File Navigator interface enables you to quickly navigate to device custom panels. A custom panel is a user interface created using the PanelBuilder™ tool in DashBoard. Custom panels can include any combination of PanelBuilder objects, panel components, and parameters. Custom panels enable you to create interfaces for your DashBoard Connect devices, then load the panel file to the Ultritouch for operating and monitoring that device.

### For More Information on...

- using PanelBuilder, refer to the ***DashBoard User Guide***.

## Before You Begin

PanelBuilder provides a template for creating and editing a custom panel for use on an Ultritouch hard panel. This template is a canvas layout of 1304x203 pixels to match the hard panel display area. You must create a custom panel using PanelBuilder on your DashBoard client computer before you can upload and use it on Ultritouch.

Figure 28 Ultritouch — Example of a Loaded Custom Panel

### For More Information on...

- creating and editing custom panels for Ultritouch, refer to the ***DashBoard User Guide***.
- creating a soft panel for Ultrix, refer to the ***Ultrix and Ultricore Database Guide***.

## Uploading a Custom Panel File to the Ultritouch Directory

Once you have created your Ultritouch custom panel in PanelBuilder, you can open and load the file to an Ultritouch hard panel. You can upload multiple custom panels to the Ultritouch system, but the hard panel can only display one custom panel at a time.

- ★ Before proceeding, ensure you have established communications between the Ultritouch and the device the custom panel was designed for.

### To upload a custom panel file to the Ultritouch

1. Navigate to the Ultritouch Device interface using the method described in “**To access the Ultritouch interfaces via a DashBoard client computer**”.
2. Click **Manage Custom Panels**.

The Custom Panels interface displays in the DashBoard window.

3. Click **Upload to Folder**.

The Upload File dialog opens.

4. Select the custom panel file to load.

★ Uploaded \*.zip files (custom panels with image assets etc.) are automatically unzipped into a directory named the same as the original \*.zip file.

## Using Custom Panels

To operate a custom Panel, use the File Navigator to browse the Custom Panels directory. The File Navigator interface displays and uploaded custom panels in a hierarchy. This hierarchy is determined by the timestamp of the loaded files.

### To open a custom panel

1. On the Ultritouch hard panel, tap .
2. Navigate to the file you wish to open.
3. Tap **Open File**.

### To remove a device file from the File Navigator interface

1. On the Ultritouch hard panel, tap .
2. Navigate to the file you wish to remove.
3. Tap the file to reveal the available operations.
4. Tap **Remove**.

# Managing Open Windows

Ultritouch tracks the DashBoard Connect devices that you frequently access and arranges their “view” in a single window for ease of use.

★ This chapter uses the Ultritouch-2-HR in its examples, but the information also applies to the Ultritouch-4.

## To specify a new device view

1. Tap .
2. Tap **Manage Open Views**.

3. Perform one of the following:
  -  — Tap this button to display the Devices Navigation interface.
  -  — Tap this button to display the Files Navigation interface.

The interface updates to show a list of external devices made available using the procedures in “**Communications with Devices**”.

4. Tap the device you wish to view.
5. Tap **Open Selected**.

## To specify a new file view

1. Tap .
2. Tap **Manage Open Views**.
3. Tap **Files**.

The interface updates to show a list of devices files made available using the procedures in “**Using File Navigator**”.

4. Tap the entry for the file you wish to view.
5. Tap **Open Selected**.

## To view a new device interface on the Ultritouch

1. Tap .

2. Tap the entry for the device you wish to access.

### To close a device interface from the Ultritouch

1. Tap .
2. Tap the **X** next to the device name you wish to close.

# Creating a Backup

This chapter outlines how to create a backup of the current configuration of the Ultritouch.

## Overview

A backup files captures:

- Network IP address, netmask, gateway, and DNS information
- Custom panels
- License files
- LCD brightness level
- Audio level and mute
- Screen-saver image
- Video files and settings

### To create a backup of the existing configuration

1. Display the Ultritouch Utilities interface on your DashBoard client computer as outlined in “**To access the Ultritouch interfaces via a DashBoard client computer**”.

The **Backup** tab is automatically selected.

2. From the bottom toolbar, click **Create Backup**.

A compressed backup file is generated that contains the relevant information about the Ultritouch.

3. From the bottom toolbar, click **Choose Location**.

The **File Save** dialog opens.

4. Select where on your PC the backup data file will be saved.

The default location is your Documents folder (e.g. C:\Users\UserName\Documents).

5. Click **Save**.

- The backup data file is saved and the **File Save** dialog closes.
  - The backup file will have a name of "backup-Ultritouch-XXX.bin" where the XXX represents the Device ID (this ID is reported on the General Info tab).
- ★ Alternatively, if the destination folder is already correct, click **Save** at the bottom of the tab to transfer the backup data file to the PC.

# Menu System Overview

There are two methods for accessing the interfaces: a DashBoard client computer or using the Ultritouch hard panel. This chapter outlines the available menus and provides examples of the touchscreen display and the DashBoard client window.

★ This chapter uses the Ultritouch-2-HR in most of the examples, but the information also applies to the Ultritouch-4 unless otherwise noted.

## Ultritouch Device Interfaces

Use this interface to change the network settings for the panel, establish communications with devices in your routing system, manage your custom panels, and download system logs for troubleshooting.

### General Info

By default, the General Info window is automatically displayed when the Ultritouch Device interface is loaded.

★ To access this interface on a DashBoard client computer, double-click the Ultritouch Device sub-node in the Tree View.

Figure 29 Example of the General Info Window on an Ultritouch-2-HR Panel

Figure 30 Example of the General Info Tab on a DashBoard Client Computer

**Table 3** summarizes the read-only fields displayed in the General Info window.

**Table 3 General Info**

| Item              | Parameters | Description                                                                        |
|-------------------|------------|------------------------------------------------------------------------------------|
| Device Name       | <text>     | Identifier assigned to this panel during the installation and setup                |
| Device ID         | #          | An unique number assigned to the hard panel to help identify it within your system |
| Type              | <text>     | Defines the model of Ultritouch panel                                              |
| Serial            | #          | Indicates the serial number of the Ultritouch panel                                |
| DashBoard Version | #          | Indicates the DashBoard client version running on the Ultritouch panel             |
| Firmware Version  | #          | Indicates the build version of the Ultritouch panel                                |
| Download Logs     | *.txt      | Enables you to capture the communication activity of the panel into a text file    |
| Upload            |            | Enables you to update the DashBoard software running on your Ultritouch            |

## Manage Open Views

The Open Views interface display a list of custom panels and/or device files that were previously loaded to the Ultritouch panel. To access this interface, tap **Manage Open Views**.

*Figure 31 Example of the Manage Open Views Window*

*Figure 32 Example of the Manage Open Views Tab on a DashBoard Client Computer*

**Table 4** summarizes the fields displayed in the Manage Open Views window.

**Table 4 Manage Open Views**

| Item            | Description                                                                                                                  |
|-----------------|------------------------------------------------------------------------------------------------------------------------------|
| Devices         | Tap this button to display a hierarchical list of external devices that have established communications with this Ultritouch |
| Files           | Tap this icon to display a list of files recently accessed by Ultritouch                                                     |
| Show Navigation | Tap this button to display the navigation tree for                                                                           |
| Open Selected   | Tap this button to load the interface for the selected device                                                                |

## Manage Custom Panels

Use the Manage Custom Panels interface to load a custom panel file to the Ultritouch panel.

- ★ You cannot edit a custom panel using this interface. Use the PanelBuilder™ feature in a DashBoard client to create and edit custom panels for the Ultritouch. Refer to the **DashBoard User Guide** for details.

*Figure 33 Example of the Manage Custom Panels Window*

*Figure 34 Example of the Custom Panels Tab on a DashBoard Client Computer*

## Connected Devices

The Connected Devices interface provides information on the external devices currently communicating with the Ultritouch panel. From this interface you can manage which devices the Ultritouch can access.

Figure 35 Example of the Connected Devices Window

Figure 36 Example of the Connected Devices Tab on a DashBoard Client Computer

**Table 5** summarizes the fields displayed in the Connected Devices window.

**Table 5 Connected Devices**

| Item                | Description                                                                                                                                        |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| Device Name         | Reports the name assigned to the external device                                                                                                   |
| Status              | Duplicates the status reported by the device. Refer to the user guide for the device to learn more about the possible messages.                    |
| Add                 | Use this button to manually add a new device to the list of Connected Devices                                                                      |
| Remove              | Use this button to manually remove a device from the list of Connected Devices                                                                     |
| Enable Auto Detect  | Enables Ultritouch to auto-detect any DashBoard Connect compatible devices on the same IP subnet and add the device to the Connected Devices table |
| Enable Auto Connect | Enables Ultritouch to automatically connect to DashBoard Connect compatible devices and add them to the Connected Devices table                    |
| Connect             | Enables communication between the selected device and Ultritouch                                                                                   |
| Disconnect          | Disables communication between the selected device and Ultritouch                                                                                  |

## Network Settings

The Network Settings window enables you to edit and verify the IP Address and other settings according to your facility network requirements.

Figure 37 Example of the Network Settings Window

Figure 38 Example of the Network Settings Tab on a DashBoard Client Computer

**Table 6** summarizes the fields displayed in the Network Settings window.

**Table 6 Network Settings**

| Item            | Parameters      | Description                                                                     |
|-----------------|-----------------|---------------------------------------------------------------------------------|
| IP              | ###.###.###.### | Specifies the IP address for the Ultritouch panel                               |
| Mask            | ###.###.###.### | Specifies the subnet mask for the Ultritouch panel                              |
| Gateway         | ###.###.###.### | Specifies the gateway for communication outside of the local area network (LAN) |
| DNS (Primary)   | ###.###.###.### | Specifies the Primary Domain Name Server for your network                       |
| DNS (Secondary) | ###.###.###.### | Specifies the Secondary Domain Name Server for your network                     |

**Table 6 Network Settings**

| Item      | Parameters | Description                                                                                                                                                              |
|-----------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DHCP      | Off        | The user manually supplies the network settings for the Ultritouch panel                                                                                                 |
|           | On         | Automates the assignment of network settings for the Ultritouch panel                                                                                                    |
| Services  |            |                                                                                                                                                                          |
| SSH       | Selected   | Enables system administrators to securely log onto remote systems and execute commands over an unsecured network via the Secure Shell (SSH) Login client-server protocol |
|           | Cleared    | Disables this service                                                                                                                                                    |
| Walkabout | Selected   | The Walkabout configuration software can be used to configure the basic network communications settings for the Ultritouch                                               |
|           | Cleared    | Disables this service                                                                                                                                                    |

## Device Options

The Device Options window enables you to adjust the display brightness and speaker volume, calibrate the hard panel settings back to their default settings, and initiate a reboot of the panel.

## All Connections Interface

The All Connections interface provides access to the menu system and operational features of DashBoard Connect compatible devices. Only devices added via the Connected Devices interface, with established connections to Ultritouch, are accessible in this interface.

Tap  on the hard panel to display the All Connections interface. (**Figure 39**)

Figure 39 Example of the All Connections Interface

## For More Information on...

- the menu system for your DashBoard Connect compatible device, refer to its user guide.

## File Navigator Interface

The File Navigator interface in Ultritouch enables you to quickly navigate to any installed Custom Panel file. Custom Panels are created using the PanelBuilder tool in the DashBoard client software.

Tap  on the hard panel to display the File Navigator interface. (**Figure 40**)

Figure 40 Example of the File Navigator Interface

## Open Windows Interface

The Open Windows interface in Ultritouch reports which device interfaces were recently accessed by the Ultritouch. Each device is represented by a pane in the interface which includes a thumbnail of the last menu/tab that was accessed and a status bar. Select a pane to display that device on the Ultritouch, or scroll through the panes to quickly monitor the devices communicating with Ultritouch.

Tap  on the hard panel to display the Open Windows interface. (**Figure 41**)

Figure 41 Example of the Open Windows Interface

## Lock the Ultritouch Interface

You can choose to lock the hard panel so that all menus and parameters cannot be accessed.

Tap  on the hard panel to lock the panel. (**Figure 42**)

Figure 42 Example of a Locked Panel

## Ultritouch Utilities Interfaces

The Ultritouch Utilities interface displays in the right-side of the DashBoard client window and includes three tabs at the top. By default, the **Backup** tab is selected.

Figure 43 Example of the Ultritouch Utilities Interface

## Backup Tab

The Backup tab provides options for creating a text file that captures a backup of the current configuration of the Ultritouch. You can then upload and apply this file at a later date. Refer to **“Creating a Backup”** for details.

## Services Tab

The Services tab lists the available remote connection options and provides options for enabling/disabling each communication protocol.

**Table 7** summarizes the options displayed on the **Services** tab.

**Table 7 Connections — Services**

| Item                       | Description                                                                                                                                                                                                                                                                                                                                                                                                            |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Upgrade and Support Access | Remote access and upgrades are disabled by default. Remote upgrades may optionally be enabled through DashBoard via this option. Note that this option is also enabled when uploading files via the Screensaver tab.<br><br>★ On bootup or power cycle, this option will default back to Disabled. You must select Enabled again if you wish to enable web access and firmware upgrades after a bootup or power cycle. |
| Walkabout                  | Enables the primary device to communicate with devices in the Walkabout system                                                                                                                                                                                                                                                                                                                                         |
| SSH service                | Enables the ability to log onto the primary device via an SSH server. Secure Shell (SSH) Login is a client-server protocol used by system administrators to securely log onto remote systems and execute commands over an unsecured network. SSH may also be used by Technical Support for advanced troubleshooting.                                                                                                   |

## Screensaver Tab

The Screensaver tab enables you to set the timeout value, specify an image or video file to display during the screensaver, and set the duration time for shuffling between images.

# Technical Specifications

This chapter provides technical information for Ultritouch. Note that specifications are subject to change without notice.

## Physical Dimensions

**Table 8 Technical Specifications — Physical Dimensions**

| Item                   | Specification   |
|------------------------|-----------------|
| <b>Ultritouch-2-HR</b> |                 |
| Width                  | 19" (48cm)      |
| Depth                  | 2.5" (6cm)      |
| Height                 | 3.5" (9cm)      |
| Weight (approx.)       | 5.25lb (2.40kg) |
| <b>Ultritouch-4</b>    |                 |
| Width                  | 19" (48cm)      |
| Depth                  | 2.6" (6.5cm)    |
| Height                 | 7.0" (18cm)     |
| Weight (approx.)       | 12.0lb (5.40kg) |

## Ethernet Port Connectors

Each Ultritouch comes standard with two Ethernet ports on the rear panel to interface with a local network, and Ross devices that use an Ethernet protocol for communications. The Ethernet ports are operated in a link aggregated or bonded configuration to provide failover functionality.

★ The ENET 2 port is not implemented.

**Table 9 Technical Specifications — Ethernet Ports**

| Item            | Specifications |
|-----------------|----------------|
| Number of Ports | 1              |
| Connector Type  | 8-pin, RJ45    |

## Environmental

**Table 10 Technical Specifications — Environmental**

| Item                              | Specifications              |
|-----------------------------------|-----------------------------|
| Maximum Ambient Temperature Range | 0°C to 40°C (32°F to 104°F) |
| Humidity, non-condensing          | < 95%                       |

## Power

**Table 11 Technical Specifications — Power Supply Ratings**

| Item                   |  | Specifications      |
|------------------------|--|---------------------|
| <b>Ultritouch-2-HR</b> |  |                     |
| Number of Ports        |  | 2                   |
| Power                  |  | 15VDC @ 4A          |
| Input                  |  | 100-240Vac, 50/60Hz |
| Input Current          |  | 1.4A                |
| <b>Ultritouch-4</b>    |  |                     |
| Number of Ports        |  | 2                   |
| Power                  |  | 15VDC @ 4A          |
| Input                  |  | 100-240Vac, 50/60Hz |
| Input Current          |  | 1.4A                |

# Glossary

The following terms are used throughout this guide:

**Breakaway** — an act of performing a switch on only some of the signals grouped together under one label.

**Connection Point** — setting to define a communication connection between Ultritouch and a device in the routing system.

**Crosspoint** — a switch within a matrix. For example, the connection of signal IN 1 to OUT 1 requires one crosspoint.

**Destination** — a signal output from the routing system.

**Hard Panel** — the physical Ultritouch panel that provides a touchscreen interface to the menu system.

**IP Address** — a setting that defines the Internet protocol address of a device within a network.

**Label** — text that is used by control displays to identify a signal as an input or output.

**Level** — refers to a section of a routing system. For example, a video router would be one level and an audio router would be a second level.

**Logical (virtual) Label** — a name for a group of routing system inputs or outputs.

**Logical (virtual) Routing** — the action of switching a group of otherwise unrelated signals via a common label (name).

**Remote Control Panel (RCP)** — a physical hardware panel of buttons that is used to control the routing system.

**Salvo** — a system wide sequence of matrix control operations and crosspoint actions.

**Soft Panel** — a DashBoard software interface that represents a panel of buttons that is used to control the routing system.

**Source** — a signal input to the routing system.

**Ultritouch** — refers to the Ultritouch-2-HR and Ultritouch-4 unless otherwise noted.

**Ultritouch-2** — refers to an Ultritouch 2RU with a resolution of 1366 x 203.

**Ultritouch-2-HR** — refers to an Ultritouch 2RU with a resolution of 1920 x 285.

**Ultritouch-4** — refers to an Ultritouch 4RU with a resolution of 1366 x 485.

**Virtual Label** — a name for a group of routing system inputs or outputs.

**Virtual Routing** — the action of switching a group of otherwise unrelated signals via a common label (name).
